Mitosis: Detailed Evolution, Plaster, 1920

1 365 EUR

Period : 20th century

Condition : Parfait état

Material : Plaster

Length : 120 cm

Height : 40cm

Depth : 12cm

Description

The word "exceptional" doesn't quite capture the rarity of this complete set in perfect condition. These are educational models from the 1920s, made of plaster, depicting the process of cell division, known as mitosis. Each element corresponds to a biological stage, and each one bears a name that's sometimes quite technical--which I'll spare you from listing...
What if I told you that we all began our journey just like this...Each illustration consists of a mounting base attached to the support, while the cell portion is removable so that students can examine it from every angle. In perfect condition, with original polychrome coloring. Incredible. Shipping costs are included within the EU.
