De Fer Nicolas 1647 - 1720

Geographer of His Catholic Majesty 1702 and
Monseigneur le Dauphin 1690 and geographer of
the Royal Children.

Nicolas de Fer was the Son of the print dealer
Antoine de Fer. He returned to apprenticeship at
the age of 12 with the engraver Louis Spirinx in
May 1659 then worked with his father until his
death in June 1673, then with his mother until
1687, when she sells his business to him (8 Nov.
1687).

Engineer and cartographer, he will employ
several engravers who will carry out his nautical
charts, the cartography of the conquests of Louis
XIV, that is to say more than 600 maps or plans
including political, administrative, ecclesiastical,
hydrographic, orographic France, as well as
various bordering countries.

His remarkable work will result from the union of
maps in the Curious Atlas where the World is
represented in general and particular maps of
Heaven and Earth.
