Description

Superb old Orangerie windows from the end of the 19th century, three units available.

Dimensions height 275 cm width 103 cm

They are complete and in very good condition, cleaned and revised. They currently have two small integrated openings, one at the bottom of the window and the other at the top of the window by tilting (these small openings can be neutralized if necessary).

These elements have an incomparable charm, specific to the luminosity of an orangery, a charm reinforced by their age which makes them less industrial and less stiff than modern productions, they produce, in short, a romantic atmosphere
