Belmesnil 76590

medical student, Paris, October 17, 1872. Ed. Langlebert". On the title page, handwritten mention: "Work started on April 28, 1872 and finished in manuscript on August 12 of the same year. Printed in-12 by Adrien Delahaye Bookseller publisher in Paris, place de l'Ecole de Médecine". A first edition of this work will appear well at Delahaye in 1873 (in-12 of 332 pp.). A second undated edition will be published by L. Bataille (same pagination).
Edmond-Jean-Joseph Langlebert (1810-1899 or 1817-1894 depending on the sources), doctor, physicist and naturalist, professor of natural and physical sciences, clinical and special pathology. Inventor of a self-illuminating endoscope. He is the author of numerous theoretical and practical works on chemistry, natural history and medicine, and, among these, an important number concerns venereal diseases; his work La Syphilis dans ses relations avec le Mariage, being certainly the most important on the subject.
