

Large Fossil Ammonite

350 EUR

Period : Before 16th century

Condition : Bon état

Material : Stone

Length : 23cm

Diameter : 20cm

Description

Large Fossil Ammonite Ammonites were a group of marine molluscs to which today's squid also belongs. Today, these animals have their shells inside, but the Ammonites still had their shells outside the body, just like snails. This *Perisphinctes ammonite* lived in the late Jurassic and is between 163 and 145 million years old and is completely fossilized.

Condition: Very good, no cracks.

Dimensions: 23 x 20cm

Weight: 3420g.
