le Village des Brocs ; cours d'armagnac

Lecture 32700

This site of approximately 3 km² was densely occupied from 3600 to 250 BCE. The excavations yielded numerous objects made of iron and bronze (an alloy of copper and tin), in particular bronze bracelets and iron tools. Bronze metallurgy would have begun between 2500 and 2000 BCE, a late appearance compared to the Middle East but contemporary with the discovery

of copper in China. Copper and iron also provided pigments for the cave paintings which abound in the surrounding area. The inhabitants of Ban Chiang, rice farmers and breeders, were above all skilled potters: black pottery from 3600 to 1000 BCE, patterned pottery between 1000 and 500 BCE and the very famous pottery painted in red on a pink-orange background between 500 and 250 BCE¹. The site is famous for its red-painted pottery. The archaeological site of Ban Chiang has been listed as a UNESCO World Heritage Site since 1992.
