

Stereo-panoramic Camera Le Monobloc Circa 1900.

270 EUR

Period : 20th century

Condition : Etat d'usage

Material : Metal

Length : 18 cm

Description

The original Monobloc was manufactured by Boucher until 1912, when construction engineer Victor Liebe took over production. This stereo-panoramic device will undergo almost no modification. Arming the Boucher brand shutter is done by pushing the piston rod located under the plate, to the left. The choice of shutter speed is made by turning the dial located on the left side of the cylinder under the plate. The speeds are numbered from 0 (T pose) to 6 (1/100). The panoramic format is obtained by sliding the front plate to the left (device seen from the front). This brings the right objective to the center of the camera and retracts the internal separation of the two dark rooms. The lens then covers the entire surface of the sensitive plate and provides a panoramic view. Condition of use.- This item is
