Height : cm. 52

Description

Painting, pastel painting "Female portrait" - 19th century.

Delightful painting depicting a quality woman sitting in three-quarter view.

Framed in a beautiful frame with green lacquered throat, beading and golden decorations (small defects visible in the photo).

The painting can be compared to the neoclassical art movement that was very popular at the beginning of the 19th century.

The pastel painting technique, in my opinion, always gives a romantic, ethereal result to paintings.
