

Imposing Chondrite Meteorite - 1,270 Kg - Curiosity

2 500 EUR

Period : Before 16th century

Condition : Très bon état

Material : Stone

Width : 12.3

Height : 11.2

Depth : 8

Description

Exceptional pyramid-shaped meteorite with its complete fusion crust. It is a chondrite meteorite, which are the oldest rocks in the solar system, having undergone little or no geochemical reworking since their formation 4.55 billion years ago. These are the first elements from which the planets were formed. Chondrites represent 65% of the falls of galactic objects. This specimen with rare dimensions weighs 1.27 kg 12.3x11.2x8cm Provenance: NWA type meteorite. Discovered by a Bedouin in the Sahara. Former collection of the Channel.
