Description

Empire Mantel Clock France in 1810

Height: 45 cm

Width: 40 cm

Depth: 11 cm

8-day movement with rope pendulum. Striking mechanism for full and half hours on a small silver bell. When the bell rings, both on the hour and on the half hour, the sails of the mill turn for as long as the bell rings. This mechanism is very special and completely original, which is rarely encountered. The pendulum is in perfect condition and has a very high quality bronze. The gilding is perfect. A representation of this mantel clock can be found in the page of Elke Niehuser's

Book under the number.
