cm www.antiquites-biau.com OURALINE

: German chemist Martin Heinrich Klaproth
discovered uranium in 1789, and the first
documented reference to uraline was in 1817. The
addition of uranium to glass was popularized by
Josef Riedel starting in 1834. Uraline is a glass
into which uranium has been incorporated, mostly
in the form of diuranate. The proportion of
uranium generally varies from 0.1 to 2% of the
total weight of the object, but some pieces dating
from the 19th century contain up to 25%. The

color of uraline varies from yellow to green, it depends on the level of oxidation of the material and its concentration of uranium ions. The two main characteristics of uraline objects are that they glow with a green fluorescent light when placed under ultraviolet light and that they can emit radiation at a level slightly higher than natural radioactivity, although most are considered harmless.
