

Vision Under The Influence

Description

I assure you I didn't drink anything... Vision of a bee, a butterfly, I don't know, but not human in any case. Photo taken through one of the two lenses of a magic lantern, gargantuan. The lens is made of a wide brass ribbon 14 cm wide, blackened by time, which contains two thick glasses that act as a magnifying glass. The size is incredible: 30 cm in diameter. The brass frame has a solid screw thread that allows the lens to be opened to clean heavy mirrors. PS Note that you will need to clean the outside of a mirror that has retained a trace of a sticky product. Weight: caution: more than 12 kg...
