

Battery-free Addiator Or Subtractor

145 EUR

Period : 20th century

Condition : Très bon état

Material : Other

Length : 27cm

Width : 20cm

Height : 13 cm

Description

Without battery, without energy... Brilliant mechanism which in its case, fixed on a cast iron base, itself screwed to a board was able to give exact results for decades, in the office where secretaries had to do many operations... I visualize these shorthand typists ticking off the numbers with their stylus before typing the results with their typewriter, on carbon paper in triplicate.... The stylus is replaced by a pencil. Clever system where it was enough to rotate the machine on its desk support to carry out the opposite operations... Addiator and Subtractor rather rare. ... around 1920...
