

## Set Of Six Ouraline Tumbler Glasses With Twisted Effects

160 EUR

Period : 19th century

Condition : Parfait état

Material : Glass

Diameter : 5.5 cm buvant

Height : 7 cm

### Description

Very fine dichroic glass made of uranium oxide from the Ural region, which is why this glassware is called uraline. Its particularity lies in its somewhat magical coloring, the most successful of which is the one that oscillates between shades of yellow and green that play with the light, that is to say a dichroic effect. Its manufacture has been prohibited for a long time because the fumes during fusion were very harmful to master glassmakers. These goblet glasses are perfect with their twists allowing the light effects to be highlighted. Turn of the 19th and 20th centuries. Shipping in France and internationally, contact me for terms and conditions
