Collection Of 6 Deer Antlers With Deformations

350 EUR

Period : 21st century

Condition : Bon état

Material : Bone

Width : 20 cm

Height : 30 cm

Depth : 15 cm

Description

Collection of six roe deer antlers (Capreolus capreolus) with natural bone deformities, from a private collection. The anomalies in the antlers may appear in asymmetric shapes, unusual twists, or irregular growths, making them extraordinary examples of morphological variation in nature. Deformations in deer antlers can result from hormonal imbalances, trauma, or diseases. In male roe deer, these anomalies are often linked to the persistence of velvet, lack of symmetry, or permanent antlers, making them objects of great interest for collectors and naturalists.Mounted on wooden bases with hooks for easy hanging, these antlers become fascinating decorative items and authentic examples of natural curiosities. Perfect for wunderkammer, studios, shops, or interiors with a cabinet of curiosities style.Approximate
