The Scorched Anatomical Medical Torso

4 200 EUR

Period : 20th century

Condition : Très bon état

Material : Plaster

Height : 92

Description

The anatomical medical torso is a detailed model used primarily in medical education and health science teaching. This model accurately represents the anatomical structure of the human torso, including the rib cage, internal organs such as the heart and lungs, and associated blood vessels and nerves. The use of an anatomical medical torso can also extend to healthcare professionals in their daily practice, allowing them to better visualize and understand pathologies and abnormalities. In short, an anatomical medical torso is a valuable tool for better understanding the complexity of human anatomy.
