

Bulk Of Ancient Geometry

325 EUR

Period : 20th century

Condition : Parfait état

Material : Solid wood

Length : 15 cm

Diameter : 6cm

Description

Torture for the student that I was... thank you, it's better. Eighteen pieces of oak form an old collection of polyhedra, of which here is a bit of a random selection, not exhaustive: $\pi/3 \times h^2(3r-h)$, cylinder of revolution ($\pi \cdot r^2 \cdot h$), oblique hexagonal, truncated oblique circular, spherical cap, oblique or right pyramid, hexagonal prism, etc... what's cool is that you can arrange them as you like.
