Dream Stone On Wooden Base

450 EUR

Period : 19th century

Condition : Bon état

Material : Stone

Height : 13 cm

Description

Stone dimensions: 11 × 8 cm, thickness 5.5 cm, height on base 13 cm A natural dream stone (scholar's rock) with an organic and asymmetrical shape, pierced in its center, thus creating depth and visual play. The stone has warm earthy hues, ranging from light brown to beige, traversed by fine veins and natural textures. It is placed freely on a finely carved dark wooden base, the contrasting color of which highlights the stone and emphasizes the play of light and shadow through its openings. Traditionally, dream stones are valued in Chinese culture as stones of contemplation - symbols of harmony, balance and a source of inspiration for art and philosophy. This compact specimen, by its size, is particularly suitable for display on a desk, shelf or in a display case.
