Depth : 27cms 29 cms environ

Description

Forming a pendant, suitable as a console, Spanish work from the 17th century, beneath scrolls of acanthus leaves: cherub faces. The head, turned to the left, is split at the forehead, with a missing piece at the end of the leaf. There are various chips to the wood and losses to the polychromy, as well as traces of wood-boring insect damage. An electrical system has been installed and is easily removable.
