

Buffalo Horn Brush Cup, China, Late Qing / Early Republic, C. 1880

600 EUR

Period : 19th century

Condition : Très bon état

Material : Horn

Diameter : 10.2 cm

Height : 6.2 cm

Description

Turned from a single block of buffalo horn, this scholar's vessel exemplifies quiet luxury for contemporary interiors. The profile opens to a thick, rounded lip; the rim's amber translucency plays against a darker core, while subtle fibres flicker beneath the polish. A crisp studio seal underfoot (likely ????) situates the object within the literati "pure form" tradition -- minimal, tactile, material-led. Measurements Height: 6.2 cm / 2.44" Rim diameter: 10.2 cm / 4.02" Weight: 263 g Condition Clean, honest surface with even old polish and light wear; no visible chips or cracks. Displays with a soft organic glow and pairs effortlessly with stone, bronze or minimalist spaces. Shipping & Packaging Tracked, insured shipping. Professional, protective packing. Recycled materials where possible. Please
