

## Septarian Nodule On Foot

1 600 EUR

Period : Before 16th century

Condition : Très bon état

Material : Stone

Width : 45

Height : 52

### Description

Magnificent cross-section of a septarian nodule on a metal stand. Septarian nodules are fossilized mud bubbles dating back 50 to 70 million years. Belgium is an important site for the discovery of these objects. Scientists disagree on the formation of the internal shape. One possibility is the expansion/contraction of the bubbles due to the presence of trapped gas. This example is large. The color palette is fantastic, with grayish, earthy, and sandy surfaces that create a calming atmosphere. Dimensions: 52H x 45W x 11D. Without stand: 46H x 37W x 5D
