

Camera Lucida, An Optical Device To Aid Drawing

200 EUR

Period : 19th century

Condition : Etat d'usage

Material : Brass

Description

Brass camera lucida in its original case with lenses. The workbench mounting system, with a telescopic and adjustable rod, allows for optical superimposition of the subject to be drawn and transfer of the image onto a drawing. Model patented in 1806 by William Hyde Wollaston. Some lenses are missing, and three lenses have chips. Price is firm. Payment by check or bank transfer. Shipping costs EUR13 via Colissimo registered mail or Mondial Relay for France; for other countries, please contact me.
