

## Locomotive Thermometer

125 EUR

Period : 20th century

Condition : Très bon état

Material : Other

### Description

This beautiful measuring instrument comes from Italy; it displays the temperature of the steam engine running behind it. In Milan, the thermometer reading is omitted. It is mounted on a brass and cast iron laboratory stand. Coming from a collection of measuring devices, I don't know if it was originally intended for a steamship or a locomotive.
