

## Cavalry Pistol 1816 Tbis

750 EUR

Period : 19th century

Condition : Etat d'usage

### Description

Pistol manufactured by the Royal Manufactory of Saint-Étienne. Originally a flintlock pistol of the 1816 model, it was first converted to the T system after 1841. It was then converted a second time after 1816 to the TBIS system. We therefore find the markings of these modifications: on the breech tang, "M 1816 bis," and on the barrel, the caliber "17.6 A" to confirm the rebores. At the location of the blocked touchhole, there is a marking "c.1861." The number 199 is marked on the barrel, lock plate, and stock; could this be a "JUHOT" mark? Various marks are present on the brass parts. Please feel free to ask any questions.
