

## Huge Raw Hematite - 10 Kilos - Minerals

500 EUR

Period : Before 16th century

Condition : Bon état

Material : Stone

Length : 37

Height : 16

### Description

Incredible raw hematite of exceptionally large size. It measures 37cm long by 16cm high and weighs nearly 10 kilos! It is very rare to find a geode of this size. Hematite, with its black nodules, is emblematic of mineralogy. It is found in abundance in certain regions of the world such as Brazil, Switzerland, and Morocco. However, it is rare to find one of such a large size.

Provenance: from an old French collection; the previous owner had purchased it in Morocco.
