Description

? Two 1960s Glass Suns This pair of lights immediately evokes the optimism of the 1960s. Their sculpted, ray-like glass captures the light like a stylized star. When lit, they diffuse a vibrant glow; when unlit, they remain true decorative elements, almost graphic in style. A subtly modernized presence The metal structure has been repainted in matte black, creating an elegant and contemporary contrast with the transparency of the glass. This discreet intervention highlights the reliefs and reinforces their sculptural character, without betraying their original spirit. Warm and adaptable ambiance Vintage filament LED bulbs are included. Their warm light shines through the glass reliefs and creates delicate plays of shadow. They can be installed as ceiling lights or wall sconces,
