

Cave Bear - Fossil Teeth And Metacarpals

380 EUR

Period : Before 16th century

Condition : Bon état

Material : Bone

Length : 26 cm (boite)

Width : 14 cm (boite)

Description

A collection of teeth and metacarpals of cave bears (*Ursus spelaeus*), dating from the Late Pleistocene (approximately 100,000 to 11,700 years ago), from France. This now-extinct species of bear lived across much of Europe. The animal could reach up to 3.5 meters in height when standing upright and 1.3 meters at the shoulder. Preserved on cotton, 26 x 15 cm. Beautiful patinas on the fossilized bones. Formerly in the collection of Dr. G. Pontier (1875-1933), a French physician, naturalist, and paleontologist. Original handwritten label (late 19th - early 20th century). authentic fossils of exceptional quality and excellent preservation. An ideal piece for collectors of paleontology, natural history and curiosities. The sale of fossil remains of cave bears is permitted; the species being extinct, it
