

Matzka Circular Calculator - Precision Instrument - Austrian Patent - Circa 1940

55 EUR

Period : 20th century

Condition : Bon état

Diameter : 5

Description

A remarkable pocket calculator by engineer Karl Matzka (unlike the more common and mass-produced Soviet KL-1 versions, this original model is distinguished by its rarity and fine engraving). A double-sided instrument in chromed brass, it allows for the calculation of multiplications, divisions, sines, cosines, and tangents. A complete scientific object, ideal for the discerning collector or a cabinet of curiosities. The instrument is functional: the two knurled crowns smoothly actuate the movable indexes on each side, allowing for synchronous and precise reading of the scales.
