

Woolly Mammoth Tooth On Stand

485 EUR

Period : Before 16th century

Condition : En l'etat

Material : Bone

Width : 13

Height : 20

Depth : 10

Description

Magnificent woolly mammoth tooth with exceptional texture, discovered in the Danish North Sea and dating from the Upper Pleistocene, around 30,000 years ago. A fine example of a probably juvenile tooth, with superb coloration and patina. A marvel of natural history that will fit perfectly into any collection. Presented on a contemporary acrylic and metal stand.
