nde-cartes-marines/mappemonde/carte-ancienne-  
des-poles/AllOur maps and engravings are  
accompanied by a certificate of authenticity. This  
map presents the Earth in a striking new way, in  
the form of two Hemispheres. The plane that  
crosses it perpendicular to its axis follows the line  
of the Equator. The two Poles appear at the  
centers: the North Pole shows the belt of land that  
radiates around it, and gives free rein to the  
imagination as to the true make-up of these vast,  
unexplored regions. The South Pole would seem  
to offer nothing but an immense expanse of  
water, were it not for the fact that the sparse land  
surrounding it indicates, on the contrary, the  
existence of a new Continent covered in ice, and  
whose details geography will perhaps one day  
have to record in its annals...New geography  
produced by cartographer L.A Garnier in 1860, a  
member of the Société de Géographie since  
1850. The perfect sharpness of the colors, the  
choice of paper and the typographic execution  
were unanimously praised by the scientific  
community of the time. Uncommon.
