Depth : 39

Description

Elephant Made of Welded Bicycle Chains - Contemporary Sculpture in Recycled Metal A large sculpture depicting an elephant, created from bicycle chains assembled and welded onto a metal frame.This industrial-style "upcycling" artwork captivates with the finesse of its craftsmanship.The chain links create a remarkable interplay of transparency that visually lightens the animal's mass while precisely highlighting its form.The raised trunk--a symbol of luck and prosperity--along with the slender tusks, enhance its decorative character.A spectacular piece due to its size, it will naturally find its place in a contemporary interior, a loft, a gallery, a winter garden, or a professional space.High-quality craftsmanship.Unsigned.Period: late 20th
