

Polished Malachite In The Shape Of A Brain - Africa, Katanga

400 EUR

Period : Before 16th century

Condition : Bon état

Material : Semi precious stone

Length : 17 cm

Width : 15 cm

Height : 12 cm

Description

A stunning specimen of natural malachite, carefully polished to reveal an organic shape that strikingly resembles a human brain. Its characteristic botryoidal structure highlights contours reminiscent of cerebral convolutions, while its deep shades of emerald green and light green bands create a fascinating play of colors. The surface, polished to a high gloss, brings out the full beauty of the stone's natural patterns. The base has been sawn flat to ensure perfect stability. Four transparent silicone pads are attached to the underside of the piece to protect display surfaces. This unique malachite is both a remarkable collector's item and an exceptional decorative piece for lovers of minerals, natural art, and geological curiosities. Weight: 3 kg
