

3d Atlas Of The Brain, Edinburgh, 1906, Dissection

285 EUR

Period : 20th century

Condition : Très bon état

Material : Other

Description

A tool for students, professionals, or knowledgeable amateurs. Immersing yourself in 3D views of brain autopsies on dissected cadavers may not be to everyone's taste. There are even images of children's skulls.....Ah, science--it certainly has its merits. So Volume V, the section on the brain, is complete. The labels on the photos are written in English, which is normal in Edinburgh, even in 1906.
