Calcite Crystal On A Custom Mount

80 EUR

Period : 20th century

Condition : Très bon état

Length : 10,5 cm

Height : 16,8 cm

Depth : 8 cm

Description

A cubic calcite crystal: Calcite typically crystallizes in the trigonal crystal system, forming rhombohedral or scalenohedral crystals. However, under certain conditions, calcite can form cubic crystals. These cubic crystals are relatively rare compared to other forms of calcite. The formation of cubic calcite crystals can be influenced by factors such as temperature, pressure, and the chemical composition of the surrounding environment. Cubic calcite crystals are typically found in areas where there was sufficient space for the crystal to grow without interference from other minerals. Dimensions including the base: H: 16.8 cm - W: 10.5 cm - D: 8 cm Weight: 1.44 kg Shipping: International shipping available. Carefully packaged to ensure safe delivery. IMPORTANT! Custom shipping.
