

Kinetic Fiber-optic Light Table - 1970s

1 450 EUR

Period : 20th century

Condition : A restaurer

Material : Metal

Diameter : 63 cm

Height : 46 cm

Description

An elegant kinetic light-up table from the Space Age era, likely dating to the 1970s. It features a circular black metal structure on a cylindrical central pedestal, with a smoked glass top and a circular mirror at the base. Sandwiched between them is a large ring of fiber optics, creating a highly decorative lighting effect. The unit is powered by an electromechanical mechanism with a rotating color wheel, allowing the fibers to cycle through various hues. The effect--particularly striking in dim light--creates an illusion of depth and movement around the mirror. A unique and rare piece that serves as both furniture and a light fixture, epitomizing the futuristic aesthetic of the 1970s.
