

Stone Disc With A Central Hole--possibly A Clubhead From New Guinea

200 EUR

Period : 20th century

Condition : Bon état

Material : Stone

Diameter : 20.5 cm

Description

A dark gray stone disc featuring numerous light-colored inclusions, a central perforation, and a convex profile that tapers toward the edge. A sculptural and decorative piece. Its shape is reminiscent of the disc-shaped clubheads found in New Guinea. This attribution remains a hypothesis: the origin, age, and exact function have not been confirmed. The stone may be of volcanic origin, though no definitive mineralogical identification has been made. Dimensions and weight: Outer diameter: 20.5 cm Maximum thickness: 4 cm Diameter of the hole: 5.5 cm Weight: 1,450 g Condition: chips and irregularities around the rim, as well as surface marks, visible in the photographs. Item sold as is, as shown in the photos.
