Kosmos Inactinic Lamp For Photo Labs

250 EUR

Period : 19th century

Condition : Très bon état

Material : Glass

Description

Light for a photo lab. Height: 13.5 cm Ruby crystal chimney (red cylindrical glass) mounted on a brass frame. The reservoir and its Kosmos burner are housed in the brass base. The Kosmos system was invented in Germany in 1865. In the mid-19th century, brass kerosene lamps became widespread and specialized into various types, such as candle lamps, wall lamps, flashlights, and lamps for photographic development--featuring red-tinted glass that first appeared as early as 1885. These light-proof red glass sleeves are quite rare; they allow photos to be developed by providing a small amount of light without affecting the chemicals.
