Depth : 25.5 cm

Description

An interesting floor clock regulator made in 1886 by the little-known but prestigious Philippe COMPAZIEU, who was based in Montpellier in the 19th century. This regulator showcases the creation of a new compensating balance wheel made of steel and brass, crafted in 1847 and awarded a gold medal. The beautifully crafted movement features a pin escapement, a leaf spring suspension, and constant-force winding. The balancer, a thing of beauty, bears an engraved medallion inscribed with "Invented and crafted in 1847 by Philippe Compazieu, Watchmaker in Montpellier Gold Medal, First Prize, No. 2." The glass dial displays the hours and minutes from the center and the seconds at 12 o'clock (second hand missing). The case is made of blackened wood and has a mirrored back. In used condition, in
