Description

Large cluster of natural quartz crystals - Rock crystal - 38 × 33 cm A superb and imposing cluster of natural quartz crystals, also known as rock crystal, featuring a remarkable formation of translucent, multifaceted crystals.This beautiful mineralogical specimen stands out for the abundance and size of its crystals, arranged in a harmonious cluster with natural geometric shapes.The crystals exhibit beautiful transparency, alternating with milky areas and numerous internal inclusions that catch and reflect light.The entire specimen rests on its natural mineral matrix, preserving all the raw and authentic character of this geological formation.A particularly decorative piece, ideal for a cabinet of curiosities, a mineral collection, or to add a natural and spectacular touch to an
