Royale de Maubeuge" The stock is registered, and the left side bears the marking "DELFORGE," which refers to the weapons inspector, examiner, or master gunsmith working at the Royal Manufactories. He would affix his name to certify the conformity and acceptance of the stock and fittings. With its original ramrod, also registered with the same number, a fine tulip-style model; it will need to be slightly straightened to allow it to fit properly into its slot. In the photos, the ramrod has not been fully inserted to prevent any jamming; the slot is clear. Walnut stock with a crack on one side only; it is perfectly solid, unbroken, and has never been repaired, with a very beautiful wood patina and excellent overall condition. Barrel is sound and in good condition; the percussion is crisp, clean, and powerful; the muzzle is unobstructed. Both notches are clearly felt when cocking the gun. The crown ring is clearly present. Good original brass parts. All springs are present and in very good condition; the trigger mechanism is fully functional and well-adjusted. Sound internal mechanics--see photos. Disassembly is very easy; no parts are stuck, as shown in the photos. All parts are present. A good investment... Fast and well-protected shipping WORLDWIDE SHIPPING
