300 EUR

Period : 18th century

Condition : Bon état

Material : Brass

Length : 20.5 cm

Width : 10 cm

Description

A clockmaker's tool made of brass and iron, known as a "planting tool" or "geared compass." It was used to precisely determine the distance between the axes of a wheel and a pinion before drilling the plates of a clock or watch movement. The hinged frame holds four adjustable points and several iron locking screws. 18th-century European work.Details: Period: 18th century, Materials: Brass and iron, Dimensions: 20.5 × 10 cm, Condition: Wear, oxidation, and patina consistent with its age.
