Craniometer: Brain And Skeleton

785 EUR

Period : 20th century

Condition : Parfait état

Material : Other

Diameter : 25 cm

Height : 37

Description

A subject of study or the brilliant creation of a crackpot... Idon't know, but it's true that in the 19th century there were numerous absurdities inphrenological theories. Every bearded, scholarly-looking man, wearing a top hat,would put forward his own theory.... And so today we can examine a facsimileof a brain, which attempts--in vain--to hide behind a mementomori motif.A piece of a composite skeleton mounted in acraniometer frame. I should point out that these so-called scholarly measurementsled to eugenics, which was widely practiced in the 1930s and 1940s.....
