### Description

Pair of bronzes in very high relief representing the busts of Sansovino and Titian.

this pair of bronze busts in high relief is directly inspired by the famous bronze doors of the Florence baptistery by Brunelleschi.

these two patinated bronze busts are finely worked and chiseled, the dark patina is very beautiful.

these faces stand out from their base almost three quarters !!!!

it is quite unusual as a type of bronze sculpture and the effect rendered is striking!

each of them is framed in a gilded wood frame and stands out against a background of crimson velvet. the pair of framed busts form a very decorative whole. a rather unusual pair of bronzes.
