innovation that he became its leading figure. The goldsmith's services he performed made silver-lined metal famous in France for their quality. Gandais covered the copper parts of the protruding parts of his models with strips of pure silver to prevent wear, just as he executed the feet and other ornaments on his parts in solid silver. In 1834, Louis-Philippe I was awarded the King's goldsmith-plasterer's certificate, who also made him a knight of the Legion of Honor. The jury of the Industrial Products Exhibition awarded him the Silver Medal in 1834 and 1844, and the National Industry Encouragement Society, a Silver and Gold Medal. Installed in the galleries of the Royal Palace, Gandais also delivered his production in other European courts, such as that of Queen Maria II da Gloria of Portugal.
