Description

**** Beautiful old cup in iridescent glass or carnival glass in a polylobed shape known as a handkerchief ****

Diameter: 23 cm / Max. 6.5 cm / Weight: 420 g

In its center, in strong relief, it features the flaming star with two interlocking triangles, you will notice that one has a granite surface texture while the other has a polished surface.

The very nicely animated object with eight lobes borrows, like a pleated fabric, a radiant decoration of gadroons while on the reverse a decoration of waves adorns each lobe and accentuates the effect of undulation of the form.

* Carnival glass gets its iridescent sheen from the application of metallic salts while the glass is still hot from the pressing. A final firing of the glass brings out the iridescent properties of the salts,
