Description

Pair of columns in Buxy stone (Saône et Loire) in the Tuscan style, cut in the 20th century, Buxy stone is a very hard limestone with tight fine grains and small calcite crystals, ocher yellow in color with sometimes purple veins for our pair of columns. The diameter of its shafts is 20 cm, the diameter of its capitals is 35 cm and the section of their bases, generously molded, is 35 x 35 cm. You can visit our site: www.claudeaugustin.com
